

KAVYA CHAUHAN

DATA ANALYST | BUSINESS ANALYST | BUSINESS INTELLIGENCE

✉ kavya.io@outlook.com  LinkedIn  GitHub  Kaggle  NOIDA, India

PROFESSIONAL SUMMARY

Recent Computer Science graduate who learned SQL, Python, and Power BI by building real analytics projects, not just coursework. Pulled data from APIs and scrapers, cleaned datasets up to 38,000+ records, and turned them into dashboards built to answer a specific business question rather than just display charts from flagging high-risk zones for a safety-analytics project to benchmarking sentiment across 19 EdTech platforms. Also completed Quantum's Data Analytics job simulation, applying the same approach to retail transaction data. Looking for an entry-level Data Analyst or Business Analyst role where I can keep doing this for real stakeholders

EDUCATION

University of Delhi | Delhi
B.Sc. (Hons.) Computer Science

Aug 2023 - Jun 2026

PROJECTS

GitHub AI Intelligence | Github

- Extracted, cleaned, and transformed data from 871 GitHub repositories using Python, Pandas, and the GitHub REST API, producing an analysis-ready dataset for BI reporting.
- Queried repository performance and technology-adoption trends using SQL, surfacing which programming languages and frameworks were gaining the most traction across the dataset.
- Built interactive Power BI dashboards to track popularity and engagement metrics; identified "superpowers" as the top-scoring repository (100/100 popularity score) and uncovered a positive stars-to-forks correlation, revealing that high-visibility repos also drove disproportionately higher community contribution

Technologies / Tools Used : Python, SQL, MySQL, Power BI, GitHub REST API

Mission SafeCity – Women's Safety Analytics | Github

- Generated and modeled a synthetic 20,000-row dataset of incident and location data using Python to simulate a real-world women's-safety analytics use case.
- Cleaned and validated incident and infrastructure data using SQL, ensuring reporting-grade data quality for stakeholder-facing analysis.
- Built Power BI dashboards mapping incident risk by zone; identified 40 high-risk locations and 40 recommended patrol zones, and flagged North zone as the most under-resourced (avg. 11 streetlights vs. 204 zone average, lowest CCTV density) — driving a targeted recommendation to prioritize infrastructure investment there.

Technologies / Tools Used : Python, MySQL, Power BI, Excel

Consumer Trust Analytics | Github

- Collected and processed 37,999 Google Play Store reviews across 19 EdTech platforms using a scraping API and Python, converting unstructured text into structured data for analysis.
- Designed a MySQL database and wrote SQL queries to benchmark customer-satisfaction metrics across platforms, identifying which platforms under- and out-performed peers on user sentiment.
- Built Power BI dashboards benchmarking sentiment and ratings across platforms; found Coding-category apps rated highest (4.4 avg) vs. Test Prep lowest (3.1), and identified Programming Hub as the most-trusted platform (22.7% helpful-review rate) versus under 2% for lower performers like Testbook and Udemy

Technologies / Tools Used : Python, SQL, MySQL, Power BI

SKILLS

Analytics & Reporting :	Power BI, Data Analysis, Microsoft Excel, Data Cleaning & Validation, Dashboard Development, KPI Reporting, Business Reporting, Data Visualization, Exploratory Data Analysis (EDA)
Programming Languages :	Python, C++, Go
Databases :	MySQL
Tools & Platforms :	Microsoft Excel, Git, GitHub, Jupyter Notebook, VS Code, Power BI
Frameworks & Libraries :	Pandas, NumPy, Matplotlib
Core Competencies :	Requirements Gathering, Stakeholder Communication, Business Insights, Decision Support, Critical Thinking, Problem Solving, Collaboration, Time Management

WORK EXPERIENCE

Data Analytics Virtual Experience Program

Jul 2026 - Jul 2026

Quantum (via Forage)

Remote

- Performed exploratory data analysis on retail transaction data using SQL and Python, identifying customer purchasing trends to support category-level business decisions.
- Translated data findings into stakeholder-ready analytical reports, delivering actionable recommendations and performance insights for a simulated business audience.

Technologies / Skills Used : Python, SQL, Excel, Data Analysis

CERTIFICATIONS

Data Visualisation: Empowering Business with Effective Insights

Jul 2026

Tata Group (via Forage)

Quantum Data Analytics Job Simulation

Jul 2026

Quantum (via Forage)
